

- Send messages
with text, pictures,
video and sound

LINK MMS is an easy-to-use tool for sending MMS multimedia messages. It is just as easy to create messages for one recipient as for many. Transmission reports are created in real-time and immediately provide information on the results of message transmissions. The service is accessed via a web interface.

With the **LINK MMS** service, you can send messages that include pictures, video, sound and text. Each MMS transmission can contain up to ten appendices, which are automatically compressed for optimal memory usage. The service supports transmissions in Sweden and Norway. An MMS message can be sent to hundreds of thousands of recipients. You receive delivery confirmations that messages have been delivered and you can choose to have transmissions sent either immediately or at specific points in time. Using a test transmission feature, you can review transmissions prior to sending.

Useful areas

- Offerings
- Invitations
- Seasons greetings
- Product information

Features LINK MMS
