

LINK SMS is a service for quickly transmitting SMS text messages to several recipients at the same time. Transmission statistics are presented in real-time. The service is accessed via a web interface.

Your text message can be sent to hundreds of thousands of recipients. You receive delivery confirmation for each transmission. To simplify transmissions, several standard messages can be set up so that you can choose the appropriate message for each transmission. The chosen message can then be sent either immediately or according to a schedule.

To make your messages more personal, customer-unique attributes can be inserted (personal names, customer numbers, etc.), and you can include customised sender texts in your messages with, for example, your company name.

Useful areas

- Reminders
- Invitations
- Offers
- Results
- Operational information
